Propagation

The 20-meter band has shifted propagation from a few weeks earlier. The early openings to Asia are becoming rare, and have moved mainly to early evening. Expect early-morning DX to be mainly to Europe.

Look for African contacts towards the bottom of 40 meters.

The high bands have had several good openings, especially following the Grey Line. 15, 12 and 10 meters are producing north / south openings around local sunset.

This week's sunspot number is 10, which is slightly down from 14 last week.
